

## Press Release

BEHN + BATES at Anuga FoodTec 2012

### **Better product protection due to processing new optimised bag materials**

**Optimum product protection, longer product shelf life and better product storage are requirements tightly connected with modern packaging solutions by food experts. At Anuga Foodtec 2012 in Cologne from 27 till 30 March 2012 the German packing machine specialist BEHN + BATES will show how practice could look like based on new improved technologies and better bag materials.**

BEHN + BATES is the only packing machine producer specialised with its complete know-how exclusively in the food industry. Therefore, product protection and product shelf life experience a special care at BEHN + BATES. The company has succeeded in filling hygroscopic or moisture-sensitive powder (e.g. dextrose) into PE or PP film bags of 10 to 50 kg in a clean, rapid and efficient way. The bag type – valve or open-mouth bags – plays a secondary role: Good filling results are reached for tight PP valve bags as well as FFS tubular film bags when using the right filling systems, just as the ROTOSEAL and ADAMS technologies. This was impossible some years ago because of the high dust portions of powders. Due to the clean product processing, the tight bag material and the hermetically tight bag seal, the end user gets an optimum product display as well as a better product protection from outside influences. The product shelf life is longer. The product storage is easier.

### **Technology to be seen, touched and experienced in reality**

BEHN + BATES will present filling technologies that can be seen, touched and experienced in reality at Anuga FoodTec 2012. The Wesphalian machine building company will exhibit a classical valve bag packer in its newest design. It will be equipped with an ultrasound sealing station for the hermetical tight and clean

valve seal. In addition, the model of a special powder filling spout, the so-called HAP spout, will impressively show how cleanly and economically open-mouth or FFS bags can be handled.
