

## Press Release

FILLING FOOD – CONSIDER IT BAGGED!

### A special product range for food packaging into bags

In 2008 the company BEHN + BATES, Münster/Germany, celebrated its 75th anniversary. It was founded in 1933 and has specialised in the development and manufacture of packing machines for valve and open-mouth bags of 1.5 up to 1,800 kg. Being part of the world-wide operating packing machine specialist HAVER & BOECKER, Oelde/Germany, the company has put its main focus on the international food and animal feed industry since 1998.

The delivery programme consists of pneumatic, impeller, auger and gravity packers in inline or rotating version. Automatic valve bag applicators and sealing stations are available for the automation of bagging processes.

For the filling of open-mouth bags BEHN + BATES offers manual and fully automatic packing lines for open-mouth flat and gusseted bags as well as FFS systems forming the bags from tubular films, filling and sealing them.

One of the latest products is the TOPLINE – a fully automatic packing system especially developed for the filling of powdery products into open-mouth bags of 5 to 25 kg. Its further developed machine design which is the ORBIS system for higher machine outputs was presented in spring 2008 for the first time.

Presse-Information  
FILLING FOOD – CONSIDER IT BAGGED!  
A special product range for food packaging into bags

BEHN + BATES filling plants especially stand for clean and weight-accurate product filling. They can be flexibly adjusted to the most diverse requirements.

The complete technology for the machine, weighing and control systems is developed within the company group thus resulting in a sophisticated range of machines coming up to customers requirements and reliably packing all filling products from grains up to finest powders.

Münster, March 2009
